

Assessment Test : Software Tester (QA)

Full Name :	Anshika Sangal
Email Id:	anshika.sangal.ece.2023@miet.ac.in
Contact Number:	9568636223,8126901190

Part 1: Test Case Design

A.Registration

TC ID	Scenario	Steps	Test Data	Expected Result	Type
TC-R01	Register with valid details	Enter valid name, email, password -> Submit	John Doe / john@test.com / Pass@123	Account created, confirmation shown / redirected to login	Positive
TC-R02	Register with already-used email	Enter an email that already exists -> Submit	existing@test.com	Error: "Email already registered"	Negative
TC-R03	Register with invalid email format	Enter malformed email -> Submit	john@@test	Error: "Invalid email format"	Negative
TC-R04	Register with weak/blank password	Leave password blank or enter "123" -> Submit	"" or "123"	Error: password policy not met	Negative
TC-R05	Register with all fields blank	Submit empty form	-	Error: mandatory field validations shown	Negative
TC-R06	Register with max-length name/email	Enter 200-character name/email	Long string	System accepts or shows proper length-limit error (no crash)	Edge
TC-R07	Register with special characters	Enter special character in name	-	Input sanitized, no DB error	Edge
TC-R08	Register with leading spaces in email	" john@test.com "	-	Trimmed and accepted, or proper validation	Edge

B. Login

TC ID	Scenario	Steps	Test Data	Expected Result	Type
TC-L01	Login with valid credentials	Enter correct email/password -> Submit	Registered user	Login successful	Positive
TC-L02	Login with incorrect password	Enter valid email, wrong password	-	Error: "Invalid credentials" (generic, no hint)	Negative

TC ID	Scenario	Steps	Test Data	Expected Result	Type
TC-L03	Login with unregistered email	Enter email not in system	-	Error: "Invalid credentials"	Negative
TC-L04	Login with blank fields	Submit empty form	-	Field-level validation errors	Negative
TC-L05	Multiple failed login attempts	Enter wrong password 5+ times	-	Account lockout / CAPTCHA	Edge
TC-L06	Case sensitivity of email	Login with email in different case	JOHN@Test.com	Should still log in (email typically case-insensitive)	Edge
TC-L07	Session persistence	Log in, close browser, reopen	-	Verify expected session (logged out or persisted per spec)	Edge
TC-L08	Login with special characters in password field	Enter special symbols/characters in the password	-	Login rejected, no unauthorized access	Edge

C. Task CRUD Operations

TC ID	Scenario	Steps	Test Data	Expected Result	Type
TC-T01	Create task with valid details	Login -> Add task with title/description -> Save	"Buy groceries"	Task created and appears in list	Positive
TC-T02	Create task with blank title	Submit task with no title	""	Error: "Title is required"	Negative
TC-T03	Create task with very long title	Enter 1000+ characters	Long string	Proper length validation or truncation, no crash	Edge
TC-T04	View task list after creating multiple tasks	Create 3+ tasks -> View list	-	All tasks displayed correctly, correct order	Positive
TC-T05	View task list when no tasks exist	Login as new user, view list	-	"No tasks found" message, no error	Edge
TC-T06	Edit an existing task	Select task -> change title/description -> Save	-	Updated values reflected in list	Positive
TC-T07	Edit task with invalid/blank data	Clear title -> Save	""	Error shown, task not saved with blank title	Negative
TC-T08	Delete a task	Select task -> Delete -> Confirm	-	Task removed from list immediately	Positive
TC-T09	Delete a task and refresh page	Delete -> refresh browser	-	Task remains deleted (precised in DB)	Positive
TC-T10	Attempt to edit/delete another user's task	User A tries to access User B's task via URL/ID manipulation	-	Access denied / unauthorized error	Edge

TC ID	Scenario	Steps	Test Data	Expected Result	Type
TC-T11	Create task with special characters	Title: <script>alert(1)</script>	-	Input sanitized/escaped, no script execution	Edge
TC-T12	Concurrent edit of same task by two sessions	Two tabs edit same task simultaneously	-	Data consistency maintained (no silent overwrite/corruption)	Edge

D. Input Validation & Error Handling

TC ID	Scenario	Steps	Test Data	Expected Result	Type
TC-V01	All mandatory fields validated on client and server side	Submit forms with missing fields	-	Errors shown without page crash	Negative
TC-V02	Error messages are clear and don't expose system/DB details	Trigger various errors	-	User-friendly messages only	Negative
TC-V03	Network failure during save (simulate offline)	Disconnect network mid-save	-	Graceful error, no data loss/corruption	Edge
TC-V04	Form resubmission on double-click of Save button	Double-click Save quickly	-	No duplicate task/record created	Edge

Part 2: Bug Identification (No Execution)

#	Bug / Risk Area	Severity	Reason / Impact
1	No mention of password complexity rules or confirmation field during registration	Major	Weak passwords could be accepted, increasing security risk; user could mistype password with no confirmation check
2	No visible email verification step after registration	Major	Fake emails could be registered, causing account recovery and communication issues
3	Generic "Invalid credentials" message not confirmed for login failures	Minor	If system instead reveals separate messages for wrong email vs wrong password, it leaks whether an email is registered (enumeration risk)
4	No mention of session/token expiry handling	Major	Users could remain logged in indefinitely, or sessions might expire silently causing failed task saves
5	No authorization check specified between users' tasks	Critical	Without proper access control, one user might view/edit/delete another user's tasks (IDOR vulnerability)
6	No input length limits mentioned for task title/description	Minor	Extremely long input could break UI layout or cause DB truncation errors
7	No mention of duplicate task prevention	Minor	Double-clicking "Save" could create duplicate task entries

#	Bug / Risk Area	Severity	Reason / Impact
8	No confirmation dialog explicitly mentioned for Delete action	Major	Accidental clicks could permanently delete tasks with no way to undo, causing data loss
9	No mention of splitting the task list into pages or sorting it when there are a lot of tasks	Minor	With a large number of tasks, the list may load slowly or become hard to navigate/use
10	No mention of checking or cleaning user input before its saved or shown to others	Critical	If user input is not properly checked, a hacker could enter harmful code that puts the app at risk
